

DoView Tool B12 - Four Types of DoView Strategy/ Outcomes Diagrams With Differing Evidential Status

This tool distinguishes between four different types of DoView strategy/outcomes diagrams for an agency, provider, policy, strategy or initiative based on the DoView's evidential status.

1. *Planning DoView Diagram*

Ideally built before an initiative is undertaken

Sets out what it is hoped will happen in the forthcoming initiative in terms of outcomes and the steps it is believed will lead to them

2. *Evidence-Based DoView Diagram*

Ideally built before an initiative is undertaken

Validates the 'This-Then' logic of the DoView diagram against evidence from previous research and evaluation in the sector and/or expert peer review of the diagram

3. *Implementation DoView Diagram*

Built after an initiative has commenced (or an amended version of 1 or 2)

Sets out what it is believed is currently being implemented in an initiative (may, include evidence from implementation and process evaluation)

4. *Evaluated DoView Diagram*

Built after an initiative has been evaluated

Uses evaluation findings from the initiative to show what actually happened during the implementation of the particular instance of the initiative
