

DoView Tool B23 - DoView 'What-If' Planning

It is difficult to plan in times such as the present when we face convulsive change. Rather than decision-makers attempting to achieve a consensus on the likely future strategic environment, it is better to use DoView What-If Planning. In DoView-based scenario planning, you develop more than one DoView diagram or subpart of a DoView diagram, in addition to developing 'Switch Indicators'. When these indicators cross certain thresholds, they trigger you to change your 'Current What-If DoView' to an alternative one. You then use the alternative one as the basis for your ongoing strategy. Below, when the Switch Indicator reaches a threshold it triggers moving from What-If 1 DoView (A below) to What-If 2 DoView Subsection (B below) in the Archery Initiative DoView (B4).

A What-If 1: Business as Usual DoView

B What-If 2: Additional Barriers DoView Subsection
