

DoView Tool B24 - Pre-Approved DoView Subsection Pathways in DoView 'What-If' Planning

In DoView What-If Planning (B23), when trigger indicators reach their threshold, you move to a new 'Current What-If DoView subsection' for planning and implementation. In some What-If DoView subsections, you have time to deliberate and decide which boxes to prioritize. If timing is tight when a particular What-If subsection is triggered, you can pre-approve a pathway to act fast. The Archery Initiative (B) below shows three What-If DoView subsections: What-If 1: Business As Usual, What-If 2: Additional Barriers, and What-If 3: Person Shot on the Archery Range. In What-If 2, you have time to deliberate on which middle boxes are priorities. However, if What-If 3 is triggered, you implement all boxes as A priorities immediately in order to respond fast enough.
