

DoView Tool D11 - Proxy Indicator Level-Assessment Tool

D11

This tool shows the importance of revealing the level at which proxy indicators are located within the relevant DoView strategy/outcomes diagram. Proxy or surrogate indicators are indicators that are lower down a DoView diagram because you cannot find a suitable indicator at a higher level. You can assess the level of the two proxy indicators as shown below because they are shown against a DoView strategy/outcomes diagram. You can see that the proxy indicator shown in 'B' is higher up the diagram than the one that is shown in 'A'.

A Proxy indicator lower down the strategy diagram.

B Proxy indicator higher up the strategy diagram
