

DoView Tool E1 - Types of Reporting and Accountability a Control Agency or Funder Can Require From an Initiative

This tool helps a central agency/purchaser/funder to decide on and communicate exactly what it wants from an agency, provider, policy, organization or initiative in terms of reporting and accountability. The control agency/purchaser/funder can get an initiative itself to provide any of the components below; the central agency or funder can provide one or more of them itself; or it can get other parties to provide some of the components. See DoView Planning Framework (D1) for more detail on these components.

In the example below, the organization that will provide each component from the DoView Planning Framework (D1) is shown with the box in gray. More than one party can do one of these components. For instance, the initiative improvement component is being done by the initiative and another party (e.g. a quality assurance organization or an implementation evaluator).

The initiative will itself do the ones in gray			Funder will do the ones in gray			Another party will do the ones in gray
