

DoView Tool J4 - Using DoView Prompts as a Complement to Everyday Language Prompts for AI Systems and Agents

DoView strategy/outcomes diagrams are used in organizational and initiative planning to check what an organization is planning to do and oversee and manage how it takes action in the world. Exactly the same approach should be explored to check how AI agents are interpreting users' everyday language prompts and overseeing and managing them as they act in the world. 'A' below shows a mockup of an AI-generated DoView feeding back to a user what an AI agent thinks a user is asking with their prompt about planning a cycling trip overseas. 'B' shows a DoView progress report from the AI Agent of what it has done and questions it wants the user to answer for it to proceed.

A DoView showing what the AI agent plans to do

B Portion of DoView showing what the AI agent has done and questions for user
