

DoView Tool J5 - DoView Communication Mapping

Most business and private communication focuses on what action to take next. DoView strategy/outcomes diagrams capture the 'This-Then' logic of desired outcomes and the steps needed to achieve them. DoView Communications Mapping could be implemented by building AI apps that create DoViews of what you want to achieve. Then all of your incoming messages, regardless of channel, could be split into summary snippets relevant to particular boxes within the DoView. You could review the messages and respond directly from each box. Eventually, your DoView diagrams could sync with others, so your replies land on similar boxes within their DoView. While new interfaces would be needed, AI can already build quality DoViews, and there are no technical barriers to AI splitting up and summarizing messages. So you would open your computer and, as below, see a DoView mapping of all relevant communications received overnight.
